

Simulation: bdm_cdm1024, Grid size: 512, Scheme: TSC; Snapshot-200 at redshift $z=0.0000$;
Halos selected by mass at redshift 0 in $[2.0e+11, 2.0e+11] h^{-1}M_{\odot}$ with median $2e+11 h^{-1}M_{\odot}$

Radial phase space density - averaged over 1000 halos
